Professional Summary

Computer Science Engineering student and Security Analyst with hands-on experience in cloud security governance, automated identity management, and SIEM dashboard engineering. Proficient in building Azure Landing Zones, enforcing security policies across cloud environments, and configuring Splunk for threat hunting. Demonstrated expertise in orchestrating event-driven workflows using Azure Logic Apps and Entra ID, analyzing Sysmon logs, and constructing custom SPL queries mapped to the MITRE ATT&CK framework.

Education

College of Engineering, Chengannur B.Tech in Computer Science and Engineering	2022 – 2026
Kendriya Vidyalaya, Kollam Class XII (PCM with Computer Science)	2021 – 2022

Certifications & Achievements

- **CompTIA Security+** May 2026
Verification Code: 3e93f5a71d194e199dea75247cd96d31
- **TryHackMe** Top 9% Global Ranking
- **Database Management Systems (NPTEL)** 2025

Technical Skills

- **Programming Languages:** Python, PowerShell (Scripting), C, SQL
- **Cloud & Identity:** Microsoft Azure, Azure Policy, Event Grid, Active Directory (AD), Microsoft Entra ID, IAM
- **Security Tools:** Splunk (SIEM), OpenVAS (Vulnerability Scanner), Snort, Suricata, Wireshark, Nmap, Burp Suite, Metasploit
- **Compliance & Governance:** ISO/IEC 27001 Framework, PCI DSS, GDPR, Risk Assessment, Information Security Governance
- **Operating Systems:** Kali Linux, Linux Server, Windows 10/11, Windows Server
- **Security Concepts:** Cloud Governance, Identity & Access Management, Log Analysis & SIEM, Threat Hunting, Vulnerability Assessment, Incident Detection, Cryptography, PKI, Authentication, Network Security
- **Databases:** MongoDB, MySQL
- **Core Subjects:** Computer Networks, Operating Systems, Data Structures

Projects

Enterprise Azure Governance & Security Landing Zone

Technologies: Microsoft Azure, Azure Policy, Azure Event Grid, Azure Logic Apps, RBAC

- Designed and deployed a secure, multi-subscription Azure infrastructure incorporating granular Role-Based Access Control (RBAC) and least privilege principles.
- Implemented custom Azure Policy initiatives to mandate encryption-at-rest, restrict unauthorized geographic region deployments, and enforce security compliance standards.
- Built an event-driven compliance alerting architecture utilizing Azure Event Grid and Azure Logic Apps for real-time notification of non-compliant resource creation.

Automated Employee Onboarding Pipeline

Technologies: Microsoft Azure, Azure Logic Apps, Microsoft Entra ID (Azure AD), PowerShell

- Engineered an automated, event-driven identity management workflow integrating Azure Logic Apps with Microsoft Entra ID for streamlined user provisioning.

- Programmatically assigned role-based entitlements, license tiers, and security group memberships to eliminate manual administrative overhead and misconfiguration risks.
- Integrated automated validation checks and notification alerts to log identity provisioning events and enforce Zero Trust onboarding protocols.

Reverse TCP Attack Detection & Threat Hunting Dashboard

Technologies: Splunk Enterprise, Sysmon, XML, SPL, RegEx, MITRE ATT&CK Framework

- Architected a SOC-grade threat hunting dashboard in Splunk using Simple XML to monitor, visualize, and correlate reverse TCP callback attacks and payload execution vectors in real time.
- Developed custom regular expressions (**rex**) to dynamically parse raw Sysmon XML telemetry (Event IDs 1, 3, 11) for key field extraction, including Process GUIDs and destination endpoints.
- Constructed multi-event correlation queries mapped directly to MITRE ATT&CK techniques (T1059: Command Execution, T1071: C2 Communication, T1105: Ingress Tool Transfer).
- Integrated dynamic UI controls (*time_tok*, *proc_tok*) and top-level KPI metrics to accelerate SOC analyst investigation workflows and baseline noise reduction.

Relevant Coursework

- Computer Networks
- Operating Systems
- Database Management Systems
- Cryptography Fundamentals
- Network Security
- Data Structures and Algorithms
